

RIGID BOOM VANG MEASUREMENTS

Each boom vang is custom made for each boat. The measurements we would need are as follows:

- 1) The distance from the underside of boom straight down to the lowest point of the mast where the mast bracket can be mounted.
- 2) Templates of the aft part of mast and the underside of boom. A simple way of doing this is to take a piece of soldering wire and bend it around the aft part of mast, then trace the shape onto a piece of paper. Repeat the process on the underside of boom.
- 3) Size and make of boat.

Measurements for existing brackets

Distance from center hole on mast bracket to center hole on boom vang

To order you may fax or mail templates to Garhauer Marine New Zealand. Please include your full name and phone number on ALL pages you send. If you have any further questions please contact us at
